Abstract :

Can anyone who worked on something like this describe the general process? I'm very confused right now. By report I mean a visually appealing document with logo, tables, headers and footers, and the data will be retrieved dynamically. The approaches I looked at are: Use a server side library (node.js module) that generates the PDF. Send the string representation as response with Content-Type: application/pdf. Problem: I chose PDFKit, but it doesn't work and no content shows up at all. It uses PDF 1.3, which is old. Generate PDF on client side. Problem: Most popular library seems to be jsPDF, but it's not very capable of producing sophisticated-lo
